Platinum Grates are perfectly flat with a satin smooth surface and of great strength, precision and a long service life in a wide range of architectural situations such as floor grates, to cover water run off drains in places such as driveways, car parks, in-door/out-door living spaces, commercial bathrooms, pools even bar tops.

Platinum Screens are made from V shaped profile wire which is spirally wound around a cage of longitudinal support rods. Each intersecting point of these wires is fusion welded, with a unique welding process. The pitch of winding gives different spacing between two adjacent turns of wire. This spacing gives passage for water to enter. The entire process is completed on fully computerized machines.
